

Knowledge is power. The power to take the correct decisions in planning the development of your business. To gain this knowledge, access to the most up-to-date information is crucial. The CFR Construction Forecasts provide this in an easy to read format.

Will private investment recover in time to compensate for falls in public expenditure?

Share of sub-sectors in public non-residential orders

Infrastructure orders and output, £m, 2000 prices

Compiled by a panel of industry experts – comprising contractors, building materials producers, property agents and financial and professional institutions – the forecasts cover every major sector of the construction industry. Based on a clear set of assumptions, the analysis and commentary take account of the most current, accurate and relevant data.

Forecasts are made for the following sectors:

- public housing
- private housing
- infrastructure
- public non-residential construction
- private industrial construction
- private commercial construction
- repair and maintenance work

Supporting historical data and regional and sub-sectoral breakdowns (for example, health, education, roads, rail) allow past trends to be analysed and patterns in specific sectors to be highlighted and related to the overall picture. A macroeconomic forecast provides the framework to the outlook for construction.

An **annual subscription** to the forecasts (price **£375**) includes two main reports in the winter and summer, plus two updates in the spring and autumn. To place your order and keep yourself abreast of the latest developments in the market, please complete the order form overleaf and post or fax it to us. We will dispatch the report to you by return. The **Summer 2010 edition** of Construction Forecasts is also available for **£210**.

About Experian's construction forecasting and research team (CFR)

CFR specialises in the analysis of the construction and related industries in the UK and Europe. In addition to our national construction forecast, our regular reports include detailed forecasts for the UK regions and 19 European countries. We also offer a variety of consultancy services from short studies to major research projects spanning from market analysis to strategy presentations. To obtain further information about these services please indicate your interest on the order form overleaf.
